

Words from patient, Andrew K. (RPN)

Testimonials help me because knowing how other people feel about chiropractic care gives me confidence in the process. Patient testimonials help to solidify the work that the doctor does as well as the science behind chiropractic. As a nurse, I understand a little more than the average person about anatomy and physiology and to me, chiropractic care makes sense.

Testimonials are important for patients because people need to hear that chiropractic is safe when it is being practiced by a professional.
